

HONG KONG AIRLINES SELECTS ONAIR

Complete SwiftBroadband inflight connectivity solution to be installed on new Airbus A330 fleet

Geneva, Switzerland, 23 June 2009 - Hong Kong Airlines and OnAir today announced agreement to install full Mobile OnAir and Internet OnAir inflight passenger communications services on their new fleet of twin-aisle Airbus A330 aircraft - four A330-200 and six A330-300. These will be delivered starting November 2010, and will operate on routes in South-East Asia, China and North America.

Hong Kong Airline passengers will be able to stay connected inflight using their own mobile phones or smartphones to make and receive phone calls, send and receive text messages and emails, and access the Internet. Using the Internet OnAir service, passengers will be able to access the Internet just as they do on the ground by connecting their laptops either wirelessly or via a wired connection. With OnAir providing both GSM/GPRS as well as Wi-Fi Internet, Hong Kong Airlines' passengers will have the broadest range of inflight connectivity options available anywhere in the world today.

Hong Kong Airlines' President Mr Yang Jianhong said "We are constantly looking to improve our passengers' travel experience. As we expand our fleet of aircraft, this latest technology from OnAir helps us further differentiate our service, and enables our customers to stay in touch with colleagues, family and friends while they travel."

"OnAir is proud to be working with Hong Kong Airlines in providing the very highest performance inflight connectivity for passengers flying on their new A330 fleet," said Benoit Debains, CEO of OnAir. "The Mobile OnAir and Internet OnAir services together provide air travellers with a complete solution: a full range of service whether they are using mobile phones, smartphones or their laptops - and with global coverage. The announcement underlines the superiority of OnAir's technology and builds significantly on our outstanding customer base."

Mobile OnAir uses the industry's most advanced and extensive infrastructure for mobile communications, along with Inmarsat SwiftBroadband, high capacity services from Inmarsat 4th generation satellites. This gives Hong Kong Airlines' passengers the best reach and performance available today.

Passengers can use Mobile OnAir to stay in touch as they fly on over 8,000 flights each month, to over 240 cities in over 50 countries across Europe, the Middle East and North Africa. OnAir has operated more than 22,000 fully connected SwiftBroadband flights to date and has signed agreements with more than 15 airlines worldwide.

The announcement comes amidst mounting demand for inflight passenger communications. A growing number of commercial airlines and private aviation companies either currently offer OnAir inflight communications services or will offer them in the near future.

OnAir also serves corporate jets, private VIP and Governmental customers.

According to a recent survey, 93% of passengers who have used Mobile OnAir services on selected flights would like these services to be available on every

flight.

About OnAir

OnAir is the leading provider of inflight communications, enabling passengers to stay connected during their flight, and airlines to offer new services and generate additional revenues. Present on four of five continents, OnAir provides the only air-travel industry sponsored solution, now available to regular and low-cost airlines, to private and corporate jets, on Airbus and Boeing aircraft, and on long and short-haul flights. OnAir is the only provider of services based on SwiftBroadband, the latest high-bandwidth satellite technology from Inmarsat, which offers GSM and GPRS for voice, data and Internet.

OnAir was incorporated in February 2005 and is owned by SITA, the leading IT solutions provider to the air transport world and Airbus, the leading aircraft manufacturer. OnAir is a member of the GSM Association and an Inmarsat Distribution Partner for SwiftBroadband services.
